

Poinsettias

Care Instructions

Caring for a poinsettia is easy, and with a bit of extra attention, your poinsettia can survive past the holiday season, thriving year-round.

Light  6 Hours of Sun

Temperature  60 to 70 °F Day
   55 °F Night 

Temperature is the most crucial component for poinsettia growth. The plant should not touch cold windows or be near drafts from radiators or doors.

Watering

Watering your poinsettia when the soil is dry is important. Make sure you punch holes in the foil wrapper so that extra water can drain. Toss this extra water, which can cause root rot if not discarded.

Fertilizing

Prune by 8"

 Spring 2-3 wks  Summer 2-3 wks  Fall 2-3 wks  Winter monthly

Rosemary

Care Instructions

Planting Guide

Enjoy indoors for a month or two but eventually should be outdoors in containers or the garden. Well drained soil. Prune to shape as desired.

Light  6 to 8 Hours of Sun

Temperature > 20 °F 

Established plants in the ground can tolerate 20 degrees F but protect or bring in smaller containers when below 30 degrees F as roots are more sensitive to cold.

Watering

In pot, water thoroughly but allow soil to dry slightly between watering. In the garden, keep on the dry side.

Feed lightly during periods of growth
